Exploratory analysis	Assessment	Observed outcome
Training-posterior draws	Source diagnostic	MMD not improved
Coordinate permutation	Source diagnostic	MMD worsened
Reference-template prior	Source diagnostic	Mixed; extra information
KL warmup	Reconstruction	Accuracy decreased
Latent-conditioned AR	Latent use / generation	Detected / criterion unmet
Direct-latent diffusion	MMD / dipeptide JS	Criterion unmet
Conditioning context	Conditioning variants	Criteria unmet

Each analysis addresses a distinct representation or sampling question.
Full criteria and numerical results are provided in Supplementary Table S4.
